WORK EXPERIENCE

- | | |
|---------------------|---|
| MAR 2017 - CURRENT | Research Technologist at LOS ALAMOS NATIONAL LABORATORY
<i>Los Alamos, NM</i>
Software engineering focused on complex mesh generation. Lead developer on an open-source library for generating dynamically refined multi-material Delaunay meshes from GIS data (Python/C++). Developer on a novel NNMF-based classifier for bio-remediation applications (Julia). Lead developer on a PETSc-based multiprocessor mesh transformation / visualization program (Fortran90). |
| MAY 2016 - JAN 2017 | Research Analyst at GLOBAL PATENT SOLUTIONS
<i>Scottsdale, AZ</i>
Perform patentability, freedom-to-operate, invalidity and state-of-the-art searches on technologies involving high-level nanotechnology, semiconductor, or electromagnetic elements. Improved ability to remove jargon from scientific technologies and to view only the crux of the technology and methods. |
| JUN 2015 - DEC 2015 | Machine Learning Research Assistant at SPACETREX (ASU)
<i>Tempe, AZ</i>
Responsible for codebase re-factoring, parallelization (OpenMP), and algorithm optimization for an artificial neural network designed for autonomous formation and flight paths of drone clusters (language: C). |
